ARGUS TECHNOLOGIES MAKES CONTINUOUS ADVANCEMENTS AND UPGRADES TO THE CORDEX™ CXC CONTROLLER WITH NEW SOFTWARE V1.91

Vancouver, Canada (February 15, 2006) — Argus Technologies, designer and manufacturer of DC power solutions for the communications industry, releases Cordex CXC software version 1.91. Argus makes continuous improvements to the Cordex CXC software adding industry leading enhancements as well as specific features requested by our customers. This latest version debuts the new graphical web interface with significantly faster page loading time. The new interface is more intuitive while maintaining the same menu structure as previous versions.

“In addition to the redesigned interface, there are many new features in version 1.91 including remote triggering of battery tests, increased number of assignable custom alarms and remote battery testing,” comments Bill Killion, Product Manager. “We expect to have additional features in the upcoming version 1.9x series releases including support for new Cordex peripheral devices.”

Many other enhancements are included in the 1.91 version software upgrade. Existing customers can download the new software from the Argus website. www.argusdcpower.com.

As a member of The Alpha Group, Argus is part of a global alliance of independent companies that share a common philosophy – to create world class powering solutions for communication, alternative energy, industrial, commercial, and government markets. Other members include Alpha Technologies, and G.B. Enterprises.

Argus Technologies specializes in the design and manufacture of premium quality DC power solutions for the global communications industry. Argus products include custom DC power systems, enclosures, rectifiers, converters, and system controllers. Argus also offers EF&I, training, and 24/7 technical support through its dedicated service network.
