ALPHA TECHNOLOGIES LAUNCHES NEW CXPS-HX HIGH CAPACITY DISTRIBUTED POWER SYSTEM FOR CENTRAL OFFICE APPLICATIONS

Vancouver, BC. October 9, 2013 – Alpha Technologies Ltd., the power behind the evolution of telecommunications networks, today announced the launch of the new CXPS-HX 48-2500, its latest 48V high capacity distributed power system, at OSP EXPO 2013 (Booth 325) taking place on October 9-10, 2013 at the Dallas Convention Center, Texas.

The **CXPS-HX 48-2500** is a complete -48Vdc power plant that combines high efficiency rectifiers and flexible distribution options packaged in a single 7-foot box frame. It can be deployed in a distributed architecture requiring higher capacity distribution positions as well as in a centralized framework.

Unlike other midsize power plants, the CXPS-HX can accept both three phase and single phase rectifiers in combination with a variety of distribution configurations, making it ideal for deployment in new small switching center, data center or office expansion applications.

“The latest in Alpha’s line of 48V plants for large and midsize offices, the CXPS-HX 48-2500 incorporates all the electrical advantages of our centralized power systems,” said Rahul Baliga, Associate Product Manager - Power and Distribution Systems at Alpha Technologies. “The box frame configuration enables our customers to use both large and small cables freely, knowing there will be ample space for future moves, adds and changes. By providing the option to use the 4kW rectifiers and Cordex Controller as used in our CXPS systems, customers can take advantage of existing spares and administrative procedures.”
